

Multibend

Habia Cable's range

Multibend FJ

Multibend FJ is an alternative solution to the Flexiform range of semi-rigid alternative cables. With electrical performance that is very nearly that of its best-selling cousin, Multibend uses a different screening solution that enables repeated flexure of the cable far beyond that of the 'repositionable' Flexiform.

Though not so common, Multibend can also be produced on request as an HFJ variant.

Conductor	SPC or SCCS
Dielectric	Solid PTFE
Shield	Bonded, SPC foil + SPC braid
Sheath	FEP, Blue-transparent
Temp.	-65°C / +180°C
